PROJECTS

Neural Network Model for Cortisol Regulation

Developed a machine learning model using Random Forest to predict cortisol spikes based on real-time physiological data such as blood sugar, albumin, creatinine, and WBC count. Collected and preprocessed medical data from clinical sources, applied feature engineering, and achieved stress prediction accuracy through model tuning and validation.

Online Voting and Polling System

An online voting system is a software platform that allows groups to securely conduct votes and elections. High-quality online voting systems balance ballot security, accessibility, and the overall requirements of an organization's voting event.
